Cut Your Costs by Switching to Parallels RAS

Make remote application and VDI delivery inexpensive by choosing Parallels® Remote Application Server (RAS). Join the thousands of organizations that already improve UX while saving costs.

No Expensive Add-ons
Parallels RAS is a full-featured, modular, cost-effective application delivery and VDI solution. It does not require third-party add-ons for load balancing, printing redirection, monitoring, reporting, and more.

Citrix Migration Tool
Migration to Parallels RAS is fast and easy with our free migration tool. Automatically map your existing published application in XenApp 6.x and move it over to Parallels RAS.

Reduce Complexity
Easy to deploy, configure, and maintain, Parallels RAS allows organizations to reduce IT complexity while increasing staff and users' productivity. The robust PowerShell API and a set of configuration wizards automate processes, freeing IT from repetitive tasks.

On-Demand Scaling
Instantly scale your infrastructure up or down, meeting demands in real time without expensive third-party professional services. Parallels RAS can dynamically create, remove, release, and load balance Windows Servers based on predefined criteria.

Lower Licensing Cost
Parallels RAS is aggressively priced, with an all-inclusive yearly subscription model that makes application and desktop delivery services more affordable. It enables any organization to leverage the advantages of cloud computing immediately.

Parallels®

"High-quality, cross-platform support is the #1 benefit of the switch from Citrix to Parallels Remote Application Server."
— Todd Zacharias, W.S. Badcock.
